

3. Functional Requirements

Local User Functions

- FR-01:** Register an account using the required personal and contact information.
- FR-02:** Log in and log out of the system securely.
- FR-03:** View and update profile information.
- FR-04:** Create a new service request.
- FR-05:** Enter a description of a household or equipment problem.
- FR-06:** Select a service category directly when the required service is already known.
- FR-07:** Submit a problem description without selecting a service category.
- FR-08:** Enter basic details about the affected item or equipment.
- FR-09:** View the service category suggested by the NLP/ML component.
- FR-10:** Accept or change the suggested service category before submitting the request.
- FR-11:** View suitable service providers based on the selected or predicted service category.
- FR-12:** View the service categories, availability, ratings, and basic details of matched providers.
- FR-13:** Send a service request to a selected provider.
- FR-14:** View submitted service requests and their current status.
- FR-15:** View details of an accepted service request.
- FR-16:** Cancel an eligible service request before it is completed.
- FR-17:** View completed service records and previous service history.
- FR-18:** Submit a rating and written feedback after a completed service.

Service Provider Functions

- FR-19:** Register a service provider account with required service information.
- FR-20:** Log in and log out of the system.
- FR-21:** Create and update the service provider profile.
- FR-22:** Select and update the service categories provided.

FR-23: Set and update service availability.

FR-24: View service requests matching the registered service categories.

FR-25: View the problem description and details of an incoming request.

FR-26: Accept an available service request.

FR-27: Reject a service request when the service cannot be provided.

FR-28: Update the status of an accepted service request.

FR-29: Add service details when completing a request.

FR-30: Mark a service request as completed.

FR-31: View completed service history and received ratings or feedback.

System Administrator Functions

FR-32: Access the administrator area using authorized credentials.

FR-33: View, activate, deactivate, and manage registered user accounts.

FR-34: View, approve, deactivate, and manage service provider accounts.

FR-35: Add, update, and remove service categories.

FR-36: View and monitor service requests and their current statuses.

FR-37: Manage invalid, duplicate, or inappropriate system records.

FR-38: View system reports covering users, providers, requests, categories, and completed services.

NLP/ML Functions

FR-39: Process the submitted problem description using the trained NLP/ML model.

FR-40: Predict a suitable service category from the problem description.

FR-41: Provide the predicted category to the service-provider matching process.

FR-42: Store the predicted category and the final selected category for later model evaluation.
